Planting and Growing Bamboo

Garden Mate breaks up clay and soil compaction allowing water to penetrate and ensures drainage so that the root ball of the bamboo doesn't rot.

Garden Delight is ideal to feed the bamboo and stop the leaf litter from becoming too hydrophobic, allowing moisture to penetrate to the root ball of the plant during dryer periods. Helps slow leaf drop.

Lawn Blend is a fertiliser specially designed for grasses to improve root structure, rhizome growth and water uptake. Helps slow leaf drop.

Break Down accelerates the decomposition of leaves and sheaths, reducing the hydrophobic potential of the leaves while improving water penetration.

Best Practice

3-5 handfuls per m² of Garden Mate in the bottom of the hole or trench when planting.

2-3 handfuls per m² of Garden Delight 2-3 times per year especially when conditions are dry.

1-2 handfuls per m² of Lawn Blend at the start of Spring and when it is raining.

Spray leaf litter with Break Down after major leaf drop especially when conditions are dry.
