Planting and Growing Hedges

Garden Mate breaks up clay and soil compaction allowing water to both penetrate and drain.

Garden Delight is ideal to both feed and fortify the plants as well as stop the soil from becoming hydrophobic and allowing moisture to stay around the root ball of the plant during dryer periods.

Lawn Blend is a fertiliser specially formulated to improve root structure, leaf growth and water uptake.

Best Practice

1-2 handfuls of **Garden Mate** in the bottom of the hole when planting, or 5 handfuls per metre if trenching.

2-3 handfuls of **Garden Delight** per plant every 3-4 months.

1-2 handfuls of **Lawn Blend** per plant when it is raining.
