

# Mighty - Min HORSE

Organically Stabilised Essential Minerals  
with added Vitamin B12

**Plus** Micro Fine Liquid Kelp

single  
once a week  
20 ml dose

- ◆ SIMPLE MEASURED DOSE
- ◆ COMPLETE ORGANIC MINERAL SUPPLEMENT
- ◆ HIGH ABSORPTION
- ◆ LESS WASTE
- ◆ VERY EFFECTIVE

**A world Class formula developed in Australia to provide your horse with the vital & essential "Trace Mineral Extras" it needs.**

**This balanced mixture has been designed to meet a weekly administration routine whereby the desired level of nutrient is maintained in your horse.**

Supplementation of these essential minerals is usually carried out with the addition to the feed of INORGANIC MINERAL SALTS in the form of chlorides, sulfates, nitrates, phosphates and carbonates.

However, the absorption rate of inorganic minerals in the body of a horse is very low, and excessive amounts of minerals are fed to the horse. These unabsorbed minerals pass out of the horse in faeces and urine. The greater percentage of the administered minerals and your hard earned money are wasted.

Now with the introduction of Mighty - Min Horse mixture it is possible to solve the problems presented when a horse is given essential trace minerals by the conventional use of inorganic minerals.

The Organic Minerals as presented in Mighty - Min Horse mixture as Organically Stabilised Minerals may be highly absorbed in a living body such as the horse, a relatively small amount of organically stabilised minerals when included in your horse's feed stuff once a week, fulfills the metabolic requirements of trace minerals.

Essential Trace Minerals provided by the Mighty - Min Horse mixture are stored in various organs ( including the liver) of the horse thus creating a valuable reserve which the horse can draw upon as and when the need arises.

All our animal mineral supplement products are formulated, manufacture, marketed and sold with APVMA Veterinary Guideline No.8

YOUR HORSE requires Essential Trace Minerals in its diet. These Essential Trace Minerals are required in relatively small but balanced amounts. They are now available in Mighty-Min Horse Mixture as a "once a week" supplement in a unique organically stabilised and Bio- available form.

## The Role of Essential Trace Minerals & Vitamin B 12

**COPPER** Part of enzymes involved in energy & Oxygen transport - Haemoglobin & maturation of red blood cells - Bone formation - Tendon & ligament formation & repair - Strength of blood vessel walls

**ZINC** Co factor in many enzymes involved in energy metabolism - bone formation - hoof - hair - skin - healing of wounds.

**IODINE** Production of hormone thyroxine - Controls metabolic rate

**VITAMIN B12** Works with Folic Acid to form RED BLOOD CELLS - Energy metabolism

**COBALT** Co factor in enzymes - interacts with Vitamin B12 & folic acid in creation of red blood cells

**SELENIUM** An essential mineral for horses - Deficient horses have muscle disorders (White muscle disease)

**MANGANESE** Co factor in enzymes involved in protein, fat & carbohydrate metabolism - involved in cartilage & bone development

**MAGNESIUM** Skeletal development - Enzymes involved in energy transfer - Transmission of muscle impulses

Usually takes 3 days to get over a run, since using TNN Might Min Horse at 22ml per week he was good to go the next day and within 1/2 hour had relaxed and all muscle tenseness was gone.

*Craig Miller - TNN Mighty Min for Racehorses*

We have just completed the bicentennial national trail and our boys were on the minerals for about 1/2 this trip (5300km from Cooktown QLD to Healesville VIC). We noticed an increase in hair growth, they held their weight much more easily, and they seemed fitter.

We also noticed some of the horses faces slimmed down. We believe they had big head and the minerals helped to remedy this ailment. He has in fact put on 80kg between these 2 photos.

*Katheryn Holzberger - Long distance trail ride*
