Growing and maintaining Lawns

Garden Mate breaks up clay and soil compaction allowing water to penetrate, improves drainage and stimulates fresh root production.

Lawn Blend is perfect for keeping the soil conditioned, stimulating root and rhizome growth, while stabilising pH, reducing water usage and helping to fortify against Lawn grubs and worms.

Break Down accelerates the decomposition of thatch eliminating the need to dethatch while improving water penetration and reducing the potential for fungal issues and weed seed germination.

Best Practice

3-5 handfuls of Garden Mate per square metre on bare soil and mixed with under-turf when laying turf.

1-2 handfuls of Lawn Blend per square metre every 3 months, except in hot, dry weather (+35°C). Water in with **Break Down**.

1-2 handfuls of Garden Mate per square metre in hot, dry weather (+35°C).

Spray **50ml/litre of Break Down** after mowing and every 3-4 weeks in Spring
