*it is that simple*

## Conditioning and improving sandy soils

**Garden Delight** improves sandy soils. Mixing with compost triggers the formation of aggregates and the creation of soil structure, improving water holding ability as well as nutrient retention, while also stimulating fresh root growth.

Four to six applications over 12 to 18 months will change the structure of the soil.

### Best Practice

#### Step 1

**Apply 5 handfuls of Garden Delight** per square metre and mix with compost. Moisten to activate biology.

#### Step 2 after 6 to 8 weeks

**Repeat Step 1**

#### Step 3 after 3 months

**Apply 1-2 handfuls of Garden Delight** per square metre and water in. Can be applied over mulch and watered in well.

#### Steps 4 - 6

Repeat Step 3 every 3 months for 3 more applications. More compost can be added during any stage.
